SnapRAG: one turn
below threshold and budget left: read the next batch of pages
document retrieval dense + BM25 + rerank
question
intent and plan (first batch, budget)
answer from fused context
confidence check (AB-RAG)
memory recall: verified state + verified reconstruction
cold archive (every turn, immutable)
snapshots (lossy, hash-chained, anchored to document pages)
after each turn: the context-quality score decides whether to snapshot; user statements go to the verified state
